PROPOSED PROJECTS UPDATE

APRIL 2014

Proposals received for consideration

Standards Australia is committed to delivering internationally aligned Australian Standards and other documents that contribute Net Benefit to communities of interest.

Stakeholders regularly submit proposals to develop, revise, amend and reconfirm Standards in order to meet identified needs. While proponents are required to demonstrate they have consulted broadly as part to their submission, proposed projects are also listed in this Update for stakeholder review and comment.

The proposals listed in this Update have not been endorsed or approved by Standards Australia for development at this stage.

If you wish to submit a project proposal, please visit the ‘Developing Standards’ section of www.standards.org.au for information and guidance.

Proponent: Cement, Concrete and Aggregates Australia, Australasian (iron & steel) Slag Association, Ash Development Association of Australia, and Amorphous Silica Association of Australia
Sector: Building and Construction
Type of Proposal: Revision
Committee: BD-031
Scope: Proposed changes to the Standard will work towards adopting a ‘performance based’ approach. It is anticipated the review will consist of minor updates of the standard requirements; inclusion of non-concrete related uses and new classes of materials; review of appropriateness and confirmation of test methods; and general updating of references to ensure the validity of the content.
Pathway: Externally Funded
National Sector Manager: Alison Scotland, alison.scotland@standards.org.au
